Continuous Professional Development

We often hear when speaking to clients just what stumbling blocks are encountered where trees, ecology and landscape design are not considered early enough in the design and planning stages of their project.

The knock on effect is a project having costly delays that could have been avoided from the start.

This is where Wharton want to help, by offering free continuous professional development (CPD) to our clients. Catering purely for their needs by creating a bespoke training session. If this is something that is of interest and you would like to discuss more then please get in touch - **01789 459458**.

CONTINUOUS PROFESSIONAL DEVELOPMENT

So what CPD sessions are available to you? Here are a few of the requests we have had lately:

- Trees in the planning system
- Tree Risk Management: dealing with pest and disease
- Managing ash dieback on development sites
- The real value of trees
- Green infrastructure and the benefits to mental health and wellbeing
- Ecology and planning
- Biodiversity Net Gain (BNG)
- Protected species
- Resilient landscapes
- Integrating landscape and design
- The Environmental Bill
- Great Crested Newt (GCN) District Licensing

In addition, it could be worth considering other issues that you might come up against that we could help with. For example:-

- Where tree, ecology or landscape matters have been considered too late
- How do trees and ecology fit into the RIBA process?
- What issues do you come up against with regards to planning?
- Have you been caught up with enforcement action or stop notices?
